## **The Leuven Itch Scale (LIS)**

The LIS is an instrument to measure itch in patients experiencing pruritus of different origin. The novelty of the LIS, in contrast with several previously developed instruments, is that it approaches itch as a symptom, and that it consequently measures all aspects of that symptom: frequency, duration, severity, circumstances, treatment, consequences, sensory characteristics, distress and location(s). Hence, it provides a comprehensive view on the issue of itch, and measures itch over the past 4 weeks. The LIS can also be used to assess subspects of itch. Indeed, we have developed algorithms to calculate subscale scores on 6 domains: frequency, duration, severity, distress, consequences and surface. Hence, the LIS can be used both in descriptive studies as in clinical trials/intervention studies to evaluate whether the therapy under study is effective in the reduction of one or more aspects of itch. The LIS is found to be a useful and clinimetrically sound instrument capable of measuring pruritus in different patient populations affected by itching (Haest et al., 2011).

### **Reference:**

*Haest C, Casaer MP, Daems A, De Vos B, Vermeersch E, Morren M, Van Steenberghe W, Ceuppens JL, Moons P. Measurement of itching: Validation of the Leuven Itch Scale. Burns 2011; 37: 939-950.*

This manual describes the coding convention and algorithms to calculate subscale scores. Each item has a predefined variable name (e.g. LIS1\_Tx). LIS1 refers to item 1 of the LIS. Tx refers to the measuring point. In a cross-sectional study, Tx will become T1 in the database. In longitudinal studies, Tx refers to T1, T2, T3, etc.

### **Example:**

*The LIS is used in a longitudinal study, measuring itch 3 times, each with an interval of 4 weeks. The first item of the LIS will be named LIS1\_T1, LIS1\_T2, LIS1\_T3, respectively.*

# Leuven Itch Scale (version 1.0 US English)

## Sensory characteristics of itching

**9.** In the past month, how did your itching manifest itself?

- |          |                          |                                  |  |  |
|----------|--------------------------|----------------------------------|--|--|
| LIS9a_Tx | <input type="checkbox"/> | A tickling sensation             | <i>"as if a creepy-crawly thing was crawling over my skin"</i> | <b>0=box not checked</b><br><b>1=box checked</b> |
| LIS9b_Tx | <input type="checkbox"/> | A tingling sensation             | <i>"on a bitter boiling hot house"</i>                         |  |
| LIS9c_Tx | <input type="checkbox"/> | A prickling sensation            | <i>"like being</i>   |  |
| LIS9d_Tx | <input type="checkbox"/> | A stinging sensation             | <i>"like some</i>  |  |
| LIS9e_Tx | <input type="checkbox"/> | A burning sensation              | <i>"like being</i>   |  |
| LIS9f_Tx | <input type="checkbox"/> | Another kind of sensation: ..... |  |  |

## Distress of itching

**10.** In the past month, how distressing was your itching?  
(Mark the bar scale below with an "X")

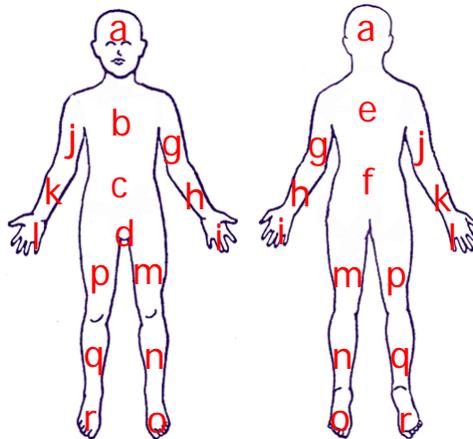

## Location(s) of itching

**11.** In the past month, which parts of your body itched?  
(shade the area(s) which itched)

LIS11x\_Tx

Indicate for each body part the **percentage** of Total Body Surface Area (palm of the hand=1%)

- |                  |                   |
|------------------|-------------------|
| a=head           | j=right upper arm |
| b=thorax         | k=right forearm   |
| c=abdomen        | l=right hand      |
| d=genitals       | m=left thigh      |
| e=upper back     | n=left leg        |
| f=lower back     | o=left foot       |
| g=left upper arm | p=right thigh     |
| h=left forearm   | q=right leg       |
| i=left hand      | r=right foot      |

## Remarks

**12.** If you have any other questions or remarks, please write them here:

## Measuring model

All items can be reported descriptively, by means of frequency distributions. Furthermore, subscale scores can be calculated, using the following model.

## Calculation of subscale scores

### **Itch frequency score**

Step 1: Transform the scores of item LIS1\_Tx to a scale from 0 to 100. Make FREQ\_Tx as output variable.

<i>Input variable</i>	<i>Output variable</i>
LIS1_Tx	FREQ_Tx
<i>Input score</i>	<i>Output score</i>
0	0
1	25
2	50
3	75
4	100

Step 2: Calculate the mean and standard deviation of variable FREQ\_Tx

### **Itch duration score**

Step 1: Transform the scores of item LIS2\_Tx to a scale from 0 to 100. Make DUR\_Tx as output variable.

<i>Input variable</i>	<i>Output variable</i>
LIS2_Tx	DUR_Tx
<i>Input score</i>	<i>Output score</i>
0	0
1	33.33
2	66.66
3	100

Step 2: Select patients with a score greater than 0 on FREQ\_Tx. Calculate the mean and standard deviation of variable DUR\_Tx

### **Itch severity score**

Step 1: Make a new variable: SEV\_Tx. Copy the scores of item LIS5\_Tx into variable SEV\_Tx.

Step 2: Select patients with a score greater than 0 on FREQ\_Tx. Calculate the mean and standard deviation of variable SEV\_Tx

### **Itch distress score**

Step 1: Make a new variable: DIST\_Tx. Copy the scores of item LIS10\_Tx into variable DIST\_Tx.

Step 2: Select patients with a score greater than 0 on FREQ\_Tx. Calculate the mean and standard deviation of variable DIST\_Tx

**Itch consequences score**

Step 1: Transform the scores of item LIS8x\_Tx to a scale from 0 to 100. Make LIS8xRC\_Tx as intermediate variables.

<i>Input variable</i>	<i>Intermediate variable</i>
LIS8a_Tx	LIS8aRC_Tx
LIS8b_Tx	LIS8bRC_Tx
LIS8c_Tx	LIS8cRC_Tx
LIS8d_Tx	LIS8dRC_Tx
LIS8e_Tx	LIS8eRC_Tx
LIS8f_Tx	LIS8fRC_Tx
LIS8g_Tx	LIS8gRC_Tx
LIS8h_Tx	LIS8hRC_Tx
LIS8i_Tx	LIS8iRC_Tx
LIS8j_Tx	LIS8jRC_Tx
LIS8k_Tx	LIS8kRC_Tx
<i>Input score</i>	<i>Output score</i>
0	0
1	25
2	50
3	75
4	100

Step 2: Calculate CONS\_Tx as output variable by summing LIS8aRC\_Tx to LIS8kRC\_Tx and dividing it by 11.

Step 3: Select patients with a score greater than 0 on FREQ\_Tx. Calculate the mean and standard deviation of variable CONS\_Tx

**Itch surface area score**

Step 1: Calculate LOC\_Tx as output variable by summing LIS11a\_Tx to LIS11r\_Tx. The maximum score is 100 (the entire body).

Step 2: Select patients with a score greater than 0 on FREQ\_Tx. Calculate the mean and standard deviation of variable LOC\_Tx
